We would like to present you with our highly reliable solutions for level measurement applications within the synthetics sector.

Please scroll

UWT GmbH is a medium-sized company for measurement instrumentation located in the popular Bavarian region of Allgaeu. We are specialists for development, manufacturing and distribution of level measurement systems and level controls for all kinds of solids applications. With our experience of over 30 years we offer excellent solutions at the highest quality level.

Injection molding/Extrusion:

Our customers **Veka** and **Salamander** successfully use rotating paddle switches from our **Rotonivo®** series and vibration forks from our **Vibranivo®** model range.

The challenge in particular:

- High pressure

Milling:

Our rotating paddle switch from the **Rotonivo®** series is also used in granulators. A great example is the application at **Wanner-Technik**.

The challenge in particular:

- Mounting in limited spaces

Dosing/Mixing:

Our measurement systems are also in great demand for dosing and mixing. **MANN + HUMMEL ProTec GmbH** trusts in our rotating paddle switches from the **Rotonivo®** series.

The challenge in particular:

- Fast switching reaction

Drying:

Motan appreciates our solution for simple and reliable level indication in their drying factories - put into effect by **Rotonivo®** rotating paddle switches.

The challenge in particular:

- High temperatures

Storing:

The popular silo manufacturer **Zeppelin** equips their silos with our rotating paddle switches from the **Rotonivo®** series and with our electromechanical plumb bob systems **Nivobob®**.

Nivobob 3100
rope version

The challenge in particular:

- Large measuring distances

Your benefit:

- Exact measuring results due to direct surface scanning
- Insensitive to humidity, dust and noise
- Simple commissioning without manufacturer support is possible
- Optional remote programming
- Professional visualisation available

Expansion of particle:

Our customer **Kurtz** installs vibrating forks from the model range **Vibranivo®** to detect fill levels in foam molding units.

The challenge in particular:

- Electrostatic charging

UWT measuring systems are used in the following sectors of industry:

- ⇒ Automotive
- ⇒ Synthetics
- ⇒ Windows and doors
- ⇒ Foil
- ⇒ Packaging
- ⇒ Profiles
- ⇒ Plastic small parts
- ⇒ Rubber
- ⇒ Environment and recycling

Let's find your solution!

Challenge us and make use of our offers:

- Telephone consulting service
- Personal visit
- Non-binding quotation
- Test installation in your factory

Did you know...

Nivobob 3200

...that with our next generation plumb bob system you can run up to 250.000 measuring procedures without any maintenance?

...that our rotating paddle switch is used in over 50 countries worldwide in the most different branches of industry?

Rotonivo 3001

...that our vibration fork is extremely cost-saving?

Vibranivo 4030

Nivowave 5000

... that the dielectric constant has no influence on the measuring result when applying acoustic wave technology?

...that the oldest of our paddle switches in use which we know of has been installed for 20 years already?

Rotonivo 3002
