

Detection of high and low levels in silos with animal feed mixture

The challenge

Our client is part of the largest group of animal feed producer in Colombia. The challenge at his application was to take a robust, economical solution that provides a guarantee of operation of the equipment for up to 5 years. Two plants located in different regions of the country should be equipped with new sensors for the application of high and low level in storage silos with animal feed mixture.

Our solution

Very robust equipment (ROTONIVOS) was offered, with patented technology that prevents sensor damage due to mechanical wear, with a guarantee of up to 5 years. Offering training to the work team, after sales service and finally great STOCK for any urgency or request of the group of companies.

Products

RN 4001

Full, Demand, Empty Detector

Short version

- Vertical, horizontal and oblique installation.
- Ideal detector for process vessels or small storage containers.

RN 4001 Rope Extension

Full Detector

Rope extension version

- Vertical installation
- Rope extension can be shortened as required.
