

Contents measurement in big bags

The challenge

Our customer required to measure the contents of small big bag silos. The washed and wet cork stoppers are initially transported to silos to dry before being packed into crates. The challenge was to provide reliable and accurate measurement in wet conditions.

Our solution

The UWT lot NB 3000 is suitable for this type of application. It functions reliably in wet and damp conditions. All product contact parts are in stainless steel, ensuring that the UWT lot NB 3000 is suitable for food sector applications.

Products

NB 3100 Rope Version

Continuous Level Measurement

- Suitable for use in most granular and coarse bulk materials.
- Threaded or flange mounting.
- Measuring range up to 30m.
- Convenient level monitoring via Modbus interface together with price competitive NivoTec 3500/4500.
