

Contents measurement in lime stone powder

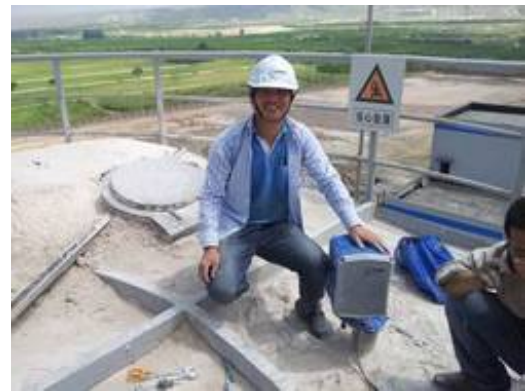

The challenge

Our customer has used a TDR technology so far in order to control the level of lime stone powder in his power plant. After a successful trial he even wanted to exchange the radar units with a reliable and suitable measuring system of UWT.

Our solution

The best solution is our electromechanical lot system NIVOBOB NB3000 of UWT. Besides the high reliability, the simplicity of installation and set-up have convinced the plant operator. The great cost-/performance ratio has been the decisive benefit.

Products

NB 3100 Rope Version

Continuous Level Measurement

- Suitable for use in most granular and coarse bulk materials.
- Threaded or flange mounting.
- Measuring range up to 30m.
- Convenient level monitoring via Modbus interface together with price competitive NivoTec 3500/4500.
